Abstract (en)

[origin: EP0540865A1] The sticking device (10) has a plurality of support arms (14) mounted on a rotary member (12) which have holders (16) at their free ends. At the delivery point (20), the holders (16) each take over an insert (18), transport these past the adhesive applicator device (22), where adhesive is applied to the inserts (18), and transport the latter to the printing products (24), where the inserts are stuck on. The printing products (24) are transported resting on supports (34) extending transversely to the conveying direction (A) and the holders (16) each intervene between two successive supports (34) and are moved by means of the control means (26) against the supports (34) in order to stick the inserts (18) on the printing products (24) and press them. <IMAGE>
