Abstract (en)
A method of paving roads wherein a filler (2) comprising a mixture of a specific aggregate and resin is filled in and coated on the surface of a water-permeable asphalt pavement (1) and gaps between aggregate materials (4) laid on the water-permeable asphalt surface, so that such defects of the water permeable asphalt as separation and moving away of the aggregate materials from one another due to many gaps therebetween or the like can be avoided, and the aggregate materials can be held firmly. <IMAGE>
