Abstract (en)

[origin: EP0541465A1] Combustion engine equipment. The device is characterised in that the cap (1) includes, in the vicinity of the open end (2), stop means (2a, 19) and, opposite the said end, elastically stretchable extension pieces (8) joined to an internal sleeve (5) for linkage with the cable; the tube (24) has an unlocking function; the plug-in part (14) includes an elastic annular clip (snap-ring) (20) mounted on the outside and exerting, via an inclined channel (22), a radial clamping function on the terminal and being in position to be neutralised by axial movement imposed by the ring. Application to ignition cables connected to spark plugs. <IMAGE>
