Abstract (en)

[origin: EP0542009A1] The invention relates to a returnable transport device having a portable, dimensionally stable outer container in which at least one bag (70) is arranged so as to be removable, which bag is matched to the hollow space of the outer container (100), is made of natural fibres and projects upwards with a vertical section (73) beyond the side wall (90) of the outer container (100), which vertical section is sealed and is stowed in the region of the plane of the opening. This results in a returnable transport system which allows practical merchandise delivery in a secured transport package and use of the transport package which is economic even in disposal. <IMAGE>
