Abstract (en)
[origin: EP0542110A1] The pallet-mounted container (1) for transporting and for storing liquids has a collapsible outer shell (2), which is releasably attached to a pallet (12) and consists of a metal lattice work, and a support insert (5) which rests against the outer shell (2) and can be folded together for the thin-walled plastic inner container (6). The plastic inner container (6) consists of a rigid, dimensionally stable lower part and a flexible upper part which can be inserted in the lower part for stacking and transporting purposes. For the purposes of empty transportation, the pallet-mounted container (1) can be dismantled easily and quickly and fitted together to form a space-saving transport unit. Without the plastic inner container (6) the pallet-mounted container (1) can be used for transporting and for storing unit loads and semi-finished products of various types.
