Abstract (en)  
[origin: EP0542120A1] In a locking device (52) for an implement (14) and an implement carrier which has two implement holders (28) which are mounted at their bottom end in a boom in a vertically pivotable manner, are directed upwards and are attached in their top area, in a vertically pivotable manner about a horizontal pivot axis, to fastening parts (40) provided on the implement (14), the fastening parts (40) or the implement holders (28) having catch recesses (48) open at one end for receiving coupling pieces (30) which are provided on the implement holders (28) or on the fastening parts (40) and can be secured in the catch recesses (48) via vertically adjustable locking pins (54) preloaded in the direction of a locking position, each locking pin (54), at its end projecting into the catch recess (48), is designed so as to be rounded off or bevelled in such a way that the locking pins (54) slide on part of the surface of the coupling pieces (30) when they enter the catch recesses (48). <IMAGE>
