Abstract (en)

[origin: EP0542692A1] A helical anchor pile (2) is preferably made of plastic in one piece with its head (3). The head (3) is reinforced on either side by a metal disc (6) or two half rings (7) and is provided with a hexagon socket (5) for attaching a turning device. Reinforcing pins (10) which pass through the head (3) and the anchor pile (2) project upwards from the head and are provided there with lateral anchors. The device is suitable for anchoring construction parts, such as high-tension-line towers, building foundations, etc., in the foundation soil.
