Abstract (en)
Synthetic fiber safety cutting scissors (10) comprising a pair of first and second elongated scissor blades (12,15), each having an inner side and an outer side and a plurality of cutting edges (18,19) separated by a plurality of non-cutting protrusions (20,21), and a gripping means (13,16); and a means (17) for pivotally securing said first and second scissor blades (12,15) to each other with said inner sides facing towards each other such that the said cutting edges (18,19) cooperate with each other to cut strands of synthetic fiber. It has been found that with the protrusions (20,21) that foreign objects such as fingers may be prevented from being intersected at the cutting edge. <IMAGE>
