Abstract (en)  
[origin: EP0543200A1] Coin tester having a coin running track which is assigned a magnet coil, operated by AC voltage, in such a way that the magnetic field of the coil correlates with a coin rolling along the running track, and having an evaluation circuit which detects the change in a parameter of the AC voltage across the magnet coil and compares the changed parameter with at least one desired value, the magnet coil being arranged below the coin running track in such a way that its magnetic field interacts with the coin edge. <IMAGE>
