Abstract (en)

[origin: EP0543214A1] Cooling device for cooling a fluid which is situated inside a vessel (1) by heat extraction via the vessel wall, the vessel wall being in contact in an efficient heat-conducting manner with an aqueous liquid (18) which cools by evaporation, and a sorption medium filling (7) being available for the water vapour flowing off in the low pressure, which filling absorbs the water vapour flowing off and absorbs, with a temperature increase, the sorption heat released in this connection. <IMAGE>
