Abstract (en)

[origin: EP0543320A1] Device for producing piles made of concrete or a similar curable injected material in the ground having two, three or four parallel vibrating tubes (10), which are connected to one another by means of a common displacement box (16), together with which they form an overall cross section with a closed geometric shape. The displacement box has on its lower end sliding surfaces (24) which converge at an angle downwards. <IMAGE>
