Abstract (en)
This is a device comprising a door (1) which is in a vertical position when closed. Its front face (3) has a cladding panel (5). At least a first unit (60) fixed to the cladding panel (5) serves to stabilise the panel and the door from relative movement in a horizontal direction, from front to back and from back to front. A second unit (50) works in conjunction with an auxiliary unit (55). The first unit (60) and the second unit (50) associated with the auxiliary unit (55) stabilise the panel (5) and the door (1) from relative movement in the plane of the front face (3), respectively in a first direction and in a second, opposite, direction. The auxiliary unit (55) is accessible from the rear face (40) of the door (1). Applicable to domestic electrical appliances, particularly dishwashers. <IMAGE>

Abstract (fr)
La présente invention concerne un appareil comportant une porte (1) en position verticale de fermeture. Sa face avant (3) est munie d'un panneau d'habillage (5). Au moins un premier élément (60) fixé au panneau d'habillage (5) sert à solidariser le panneau et la porte en translation relative horizontale, d'avant en arrière et d'arrière en avant. Un second élément (50) coopère avec un élément auxiliaire (55). Le premier élément (60) et le second élément (50) associé à l'élément auxiliaire (55) solidarisent le panneau (5) et la porte (1), en translation relative, dans le plan de la face avant (3), respectivement dans un premier sens et un second sens opposés. L'élément auxiliaire (55) est accessible de la face arrière (40) de la porte (1). Application aux appareils électroménagers notamment aux lave-vaisselles. <IMAGE>
