Abstract (en)  
[origin: WO9222472A1] It is often difficult to empty prior art collapsible package if the contents are viscous or in cream or paste form. It is therefore proposed according to the invention to provide an outer carton (2) and an inner pouch (3) in which the inner pouch can be emptied through a pouring stub (32). The bottom end (9) opposite the pouring stub is secured to only two side-walls. These two side-walls can therefore be pressed together, whereupon the bottom bends inwards and the other side-walls outwards. It is thus possible to press out even substances in cream or paste form.
