Abstract (en)

[origin: EP0544061A1] The invention relates to a clip binder for unperforated sheets of paper (30), having a front cover and a back cover (14, 18) in each case articulated on a binder spine (10), and having a clamp (22) which is substantially U-shaped in cross-section and is capable of limited displacement transversely to the binder spine (10) between a release position and a clamping position. The front leg (26) of the clamp can be pushed, by means of a clamping rib (28) projecting towards the rear clamping leg (24) and with intermediate clamping of the sheets of paper (30), onto a push-on tongue (34) arranged in the region of a cut-away (32) situated in the front cover (14) and partly engaging over the sheets of paper (30). In order to permit particularly simple manufacture of the clip binder, for example from a one-piece blank of cardboard material, the push-on tongue (34) is moulded on by its root (36) on the front cover (14) at a distance from the spine edge (12) thereof and, from there, engages over the cut-away (32) present in the front cover (14), towards the binder spine (10). Furthermore, the limiting stop (38) is arranged on the side of the free end of the push-on tongue (34) facing away from the back cover (18). <IMAGE>
