Abstract (en)
[origin: EP0544126A2] The invention relates to a printing machine having at least one back pressure cylinder (1) and at least one printing unit with a forme cylinder and inking unit (2), whose forme cylinder can be engaged with the back pressure cylinder (1). To achieve the object of providing a printing machine of this type, in which drying of printed-through printing ink on the back pressure cylinder (1) is ruled out, a spraying device (6) is assigned to the back pressure cylinder (1), in that region between the supplied and the delivered web to be printed in which said cylinder is not wrapped by a web, for spraying a liquid separating agent or solvent onto the back pressure cylinder (1), which prevents the ink from drying on.
