Abstract (en)

[origin: EP0544243A2] A base (1) which is provided with mobile and mechanically loaded functional parts has a base body (3) which has the form of a continuously flat plate, on which supporting bodies (5 to 9), which are located on a mounting side (4), with connecting parts (17, 18) in the form of plates are mounted in the functionally correct position and closely adjacent, exclusively via bonded connections (10), such as fusion connections. This construction is suitable for numerous switching, control and regulating apparatuses, and enables simple manufacture, a low weight, a high strength, good accessibility and good functional reliability. <IMAGE>
