Abstract (en)  
[origin: EP0544366A1] The segment (1) for a line lighting device (1, 1', 1'') comprises a gutter-shaped housing (2) having first and second open end portions (3 resp. 4). A gutter-shaped aligning member (30) is arranged in the first end portion, extending with a forked portion (31) thereof from the housing. A first plural contact element (21) is secured to the aligning member (30), a second contact element (22) fitting to the first one is movably mounted in the second end portion (4). On introduction of the aligning member of the segment (1) into a second element (1'), a mechanical and an electrical coupling of the elements is achieved. Adjusting means (9) may be present, which adjust an aligning member (30') introduced into the second end portion (4) to the aligning member (30) to bring them in line. Said means (9) may have a mechanically locking function (32). <IMAGE>
