Abstract (en)
[origin: WO9300057A1] Provided by this invention is a transdermal dosage unit for administering nicotine for reducing the desire or craving for smoking tobacco. The dosage unit reduces or substantially eliminates the reddening of the skin at the site of the nicotine absorption commonly associated with transdermal absorption of nicotine. Also, provided is a dosage unit which has present an agent for increasing skin wearability of the transdermal dosage unit. Additionally, provided is a method for reducing the desire or craving of a subject for smoking tobacco by use of the provided transdermal dosage unit.
