Abstract (en)

[origin: EP0544936A1] The invention relates to a drill sharpening device which can be fixedly clamped on the spindle neck (20) of a drilling machine (21) and has a rotatably mounted pin (2, 3, 4) exhibiting a holder (5, 6). In said device, a drive connection which is independent of the length of the drill chuck and spindle neck of the drilling machine can be established with said drilling machine by a separate intermediate member (23, 24), clamped in the drill chuck (22) of the drilling machine, engaging into the holder (5, 6) of the pin (2, 3, 4). <IMAGE>
