Abstract (en)  
[origin: EP0545062A1] Covering device with a flexible flat covering means (14), the edge strip (17) of which arranged at the free edge is guided in lateral guide rails (18 and 19) with in each case two running rollers (36 and 37), between which in each case one run-in roller (47) is situated, which is supplied always at the same point tangentially with the traction means (21) for tensioning the covering means (14) via a guide roller (39) arranged transversely to the run-in rollers (47) in order to prevent the traction means running off the run-in roller (47) and to make possible an unhindered length compensation inside the edge strip (17) irrespective of the position of the latter. <IMAGE>
