Abstract (en)

[origin: EP0545107A1] In the case of a method for the series production of adhesive bonds between winding forms (1) (which are constructed with blind holes (2) at the ends and, in particular, are like cylinders) for electrical components and ends (5), which are inserted into these blind holes (2), of axial connecting wires (4), a metered quantity of a highly heat resistant single-component adhesive (6) is applied onto the stamped ends (5) of the connecting wires (4). Subsequently, the connecting wires (4) are pressed into the blind holes (2) and the adhesive (6) is cured by heat radiation.
