Abstract (en)
[origin: EP0545112A1] On its base plate (10), a hand-guided plunging router has a transparent guard (30) which, as a chip deflector, is intended to protect the operator. To facilitate the handling of the machine in particular during the tool change, the guard (30) is fastened to the base plate (10) in a folding manner. To this end, it has two flexible arms (32) which are linked to pivot bearings on the base plate. <IMAGE>
