Abstract (en)

[origin: EP0545136A1] 2.1. Soft packages for tissues having a resealable tear-open tab (21) are, for reasons of improved stability, often provided with large-surface, broad adhesive labels (24). The latter are produced from a material web (26) corresponding to the width of the adhesive label (24) by punching. During application of the adhesive, a region is left untreated to form an adhesive-free grip tab (25). <??>2.2. The grip tab (25) is colour-identified by corresponding coating. An edge strip (31) is free of adhesive and also free of colour coating. The punched section is attached in the region of this strip (31). <IMAGE>
