Abstract (en)

[origin: EP0545202A1] A device for processing photographic materials and consisting of at least one tank (1) filled with a liquid and means which largely remove the tank liquid from the photographic material (4) leaving the tank and lead it back into the same tank (1), in which a) a plurality of roller pairs (3) following one above another are provided above the liquid level of the tank or are connected downstream of the tank, b) the rollers of each roller pair are arranged parallel to one another, c) at least one roller pair is provided with a liquid feed (6) directed onto the roller pair, permits with the aid of very small amounts of water an efficient washing of the photographic material (4), the water being trickled onto the uppermost roller pair (6). <IMAGE>
