Abstract (en)

[origin: EP0545751A1] The invention relates to a shielding spring-strip for electrical connectors of the type comprising contact blades made of springy metal, which are positioned and fixed in an annular seat made on at least one of the two connection shells, by means of an elastic fixing means. The shielding spring-strip is characterized in that the contact blades (6) essentially have the shape of an elastically deformable open loop, at least one (62) of the ends of which can move freely in relation to the other end (63), the means (7) for fixing the contact blades (6) consisting of at least one ring-shaped flexible link housed inside the loops. <IMAGE>
