Abstract (en)

[origin: EP0545796A1] The present invention relates to a container for soft (pasty) cosmetic, pharmaceutical or similar products. This device includes a mechanism in which an outer sleeve (6) interacts with an inner coaxial sleeve (4) in which is axially mounted, so as to slide, a cup (8) supporting a lipstick so that the relative rotation of the two sleeves (4, 6) gives rise to an axial displacement of the said cup (8). The inner sleeve (4) is secured to a base (1) by means of a tube (2) provided in the bottom wall of the base (1), including snap-fit elements (14) joined by crown portions (17) which include, on their outer face, ribs (18) intended to interact with striations (19) made on the inner surface of a skirt (5) formed at the lower part of the inner sleeve (4). This device applies particularly to the fastening of an inner sleeve on a base in a lipstick container. <IMAGE>
