Abstract (en)

[origin: EP0545807A1] In the procedure and device according to the invention for locating and grasping a roving 2, especially at its end, in a textile machine, the roving 2 being placed in a support 1 capable of rotating about its vertical axis, and having a free end 4 hanging freely outside the support 1, the support 1 is rotated about its axis until the free end 4 of the roving 2 occupies a predetermined angular position relative to this axis, the free end 4 of the roving is moved radially away from the said support 1 in order to bring it into the effective range of gripping fingers 14 belonging to a gripping member 17 movable for the transfer of the said free end 4, and the closing of the gripping fingers 14 is controlled in order to grasp the free end 4 of the roving when the latter is in the moved-away position. <IMAGE>
