Abstract (en)

[origin: FR2670221A1] Process for conditioning textile materials, especially to give them a pleasant handle and a good hydrophilicity, characterised in that the textile materials are brought into contact with a composition comprising a polydiorganosiloxane containing, per mole, at least two units of general formula: <IMAGE> in which - X is chosen from the radicals <IMAGE> . R' denoting a linear or branched C2-C8 alkylene group, . R'' denoting a hydrogen atom or a C1-C6 alkyl group, - the radicals R, which are identical or different, are chosen from phenyl and 3,3,3-trifluoropropyl radicals and an alkyl radical containing from 1 to 4 carbon atoms, - a is chosen from 1 and 2, - n is between 1 and 10, limits included, t = 0 or 1.
