Abstract (en)

A device for fixing the floating unit (1), ie the tub-drum unit, to the cabinet of a washing machine, washing-drying machine or the like, said cabinet resting on a floor (60) or the like via usual support feet (12), comprises a plurality of suspension members (10) each comprising a damper element and an elastic or spring element. These suspension members are each connected to a corresponding support foot (12) so as to transfer directly to the floor the stresses generated in said members by the floating unit (1) during washing machine operation. <IMAGE>
