Abstract (en)
[origin: EP0546482A2] In a folding container (10), provision is made for a special joint (12) to be constructed between a bottom wall (14) and side walls (16). For this purpose, a joint head (20) is mounted so as to be firmly connected to the bottom wall (14) and is furthermore connected to a blocking support (28) which supports the side wall (16) laterally. In contrast, the side wall (16) terminates in a joint socket (18) which is wrapped around the joint head (20) with a wrapping angle of about 180 DEG . <IMAGE>
