Abstract (en)
[origin: EP0547311A1] In a refrigerating apparatus, especially a domestic refrigerator (10), with at least one refrigerating space (14, 16), in which an evaporator (21) and a fan (22), which acts on it from time to time with space air, are arranged, the fan (22) is arranged in the natural convection flow of the air caused by the refrigerating output of the evaporator (21) in such a manner that, as a result of its operation, this convection flow is supported and preferably guided into the region of the walls and of the door (11) and that the fan (22) supports both the refrigerating process and the defrosting process. <IMAGE>
