Abstract (en)
[origin: EP0547356A1] A moulding clamp for moulding a beam of a concrete ceiling consists of a transverse support, two trestles, which are adjustable in the longitudinal direction of the transverse support, for fastening the side moulding of the beam, two tension bars as well as a tension rail. The transverse support (17) is formed by two conventional wood supports which are arranged mutually parallel and between which the tension rail (11) is fastened. A threaded bar with a hook, which can be hooked into cutouts (12) in the tension rail (11) and secures the two trestles (1) via a swivel nut (10), serves as tension bar. <IMAGE>
