Abstract (en)
A suction system for textile machines, in particular for ring spinning machines, comprising an upper manifold channel (2) operating in cleaning the spinning machine drafting rollers (15), and also comprising, along the entire length of the spinning machine, internal walls (1,3) which converge in the direction of floor-level ducting (6) put under vacuum by the central suction system of the factory, said converging internal walls (1,3) being sufficiently raised from the level of the floor (8) on which the spinning machine rests, to allow energetic lateral draw-in of the air surrounding the spinning machine. <IMAGE>
