Abstract (en)

Disclosed is a solid chemical for processing a silver halide photographic light-sensitive material which is prepared by pressing granules: wherein said granules comprises a primary component of a photographic processing agent coated thereon a minute amount component of a photographic agent ranging from 5 to 10 % by weight of said primary component. The solid chemical used in a solution for processing a silver halide photographic light-sensitive material is capable of containing uniformly the microconstituent components therein and being stable in a storage stability.
