Abstract (en)
A wrapping machine, particularly for wrapping cigarette packets in wrapper film, includes a series of endless band conveyors (148, 152, 156, 166, 170) carrying pushers (150, 154, 158, 172) for moving successive packets (191) along a straight wrapping line. One of the pushers (158) is heated to seal a wrapper seam. The packets pass between opposed spaced surfaces (153, 180) which are resiliently urged together so as to increase frictional drag on the wrapper so as to ensure wrap tightness and good contact with the heated pusher. <IMAGE>
