Abstract (en)

[origin: US5346608A] Neodymium and neodymium-iron alloys are obtained by electrolysis of a neodymium salt melt using magnetite as the anode material. The cathode is non-consumable or is made of iron to be consumed and form a neodymium-iron alloy. The electrolysis is preferably carried out under a protective atmosphere.

Abstract (de)

Bei der Herstellung von Neodynam und Neodynam-Eisen-Vorlegierungen für Dauermagnet-Werkstoffe durch Elektrolyse von Neodynamoxid enthaltenden Fluorid-Schmelzen werden Verunreinigungen vermieden, wenn anstelle sich verbrauchender Anoden aus Kohlenstoff Magnetit-Anoden verwendet werden. Die Elektrolyse erfolgt vorzugsweise unter Schutzgas.
