Abstract (en)  
[origin: EP0548578A1] The invention relates to an ink-roller mounting for a hand-held labeller, with a printing device (5) and a pivoting lever (20) having a bearing journal (22), onto which an ink roller (23) can be loosely slipped, the pivoting lever (20) being moved out of its position of rest away from a printing device (5) when the hand-held labeller is actuated and being moved back by spring force. To secure the ink roller (23) axially, there is formed in the housing (1) of the hand-held labeller, opposite the free end of the bearing journal and corresponding to the pivoting path of the pivoting lever (20), at least one raised run-on track (25) which is in the form of an arc of a circle and on which the ink roller (23) can be supported. There is therefore no need to provide a holding mechanism either on the pivoting lever (20) or on the ink roller (23). Whenever the ink roller (23) wants to move axially away from the bearing journal, it is prevented from so doing by abutting against the run-on track (25). <IMAGE>
