Abstract (en)

An electrophotographic photoreceptor comprising at least a photosensitive layer on a conductive base, said photosensitive layer containing oxytitanium phthalocyanine and dihalogenotin phthalocyanine is disclosed herein. The electrophotographic photoreceptor according to the present invention is very high potential stability in its repeated use and very little change in properties by environment. Therefore, using the electrophotoreceptor according to the present invention, the images can be obtained with stability. <IMAGE>
