Abstract (en)
[origin: EP0548875A1] A high-strength magnesium-based alloy possessing a microcrystalline composition represented by the general formula: $Mg_aAl_bZn_c$ (wherein a, b, and c stand for atomic percents respectively in the ranges of $80 \leq a \leq 92$, $4 \leq b \leq 12$, and $4 \leq c \leq 12$). This alloy can be advantageously produced by rapidly solidifying the melt of an alloy of the composition shown above by the liquid quenching method. It is useful as high-strength materials and highly refractory materials owing to its high hardness, strength, and heat-resistance. It is also useful as materials with high specific strength because of light weight and high strength. <IMAGE>
