Abstract (en)

[origin: EP0549423A1] The invention relates to a lens (G) for at least one signalling light, in particular for a motor vehicle, comprising a plurality of pseudo-catadioptric elements, having the appearance of catadioptric needles without acting as such. At least some of the pseudo-catadioptric elements (20) have a conical end (26) on the inner side of the lens. The making of a mould for bulk manufacturing of such a lens is thereby greatly facilitated. <IMAGE>
