Abstract (en)

[origin: EP0549437A1] The invention relates to a modular element for a hot-water circuit to be interposed between a calorie generator (12) and a receiving member (21, 24) which is capable of utilising the calories transferred by the water. This element comprises two identical rectilinear lengths of tube (1, 2) of relatively large diameter which end in flanges (3, 4; 5, 6), a rigid bracing structure (7) interconnecting these two lengths so that they are arranged parallel with one another with the terminal planes of their flanges coplanar in pairs, a pipe (8) extending between the two lengths and of a diameter which is smaller than the latter, and hydraulic equipment comprising at least one circulation pump (17, 29) mounted on said pipe.
