Abstract (en)

[origin: EP0549472A1] This invention concerns a covering device for a swimming pool, which can be moved vertically inside the pool (1) of the swimming pool, between two extreme positions, i.e. the bottom (7) and the surface of the pool, under the action of means of movement (17), this device comprising closing shutters mounted to move on a support structure (9) in such a way as to be able to occupy an opening position and a closing position. This device is characterized in that the support structure (9) is plane and rigid and forms many cells, each cell being able to be closed by at least one shutter, the means of movement (17) being able to position and hold the support structure (9) in at least a third position, situated between the abovementioned extreme positions. <IMAGE>
