Abstract (en)

[origin: US5333889A] This invention relates to a board for sliding over snow, such as a ski, snow surf or the like, provided with at least one vibration damper (9, 10) made of visco-elastic material (3) and plate or other stress element (4). At least one of these dampers (2, 5) has a complex section, for example an upturned U, so that it partially follows different planes (7, 8, 9) of the zone of the structure (1) on which it is added.
