Abstract (en)

[origin: WO9302241A1] In the tape-manufacturing process proposed, a web of textile fabric is first produced which includes hollow zones (12) running along the cutting lines. Using a cutting device (16), the web is cut into tapes (2, 2a) along the cutting lines, by means of cutters (18), in such a way that the front-facing (36) and rear-facing (38) parts of the hollow zone (12) are not joined to each other. This method thus gives tapes with a particularly fine, clean cut edge.
