Abstract (en)

[origin: EP0550110A1] A color photographic element which contains at least one color correction layer substantially free of image dye-forming coupler and comprising a spectrally and chemically sensitized photographic silver halide having a maximum absorbance wavelength in the range of about 550 to about 620 nanometers above at least one red sensitive layer of the element results in an element having excellent color reproduction, especially in the red portion of the spectrum. <IMAGE>
