Abstract (en)

A high-rise building comprises several vertical supports, made of cells corresponding to the floors, on its foundation. The ground floor is dedicated to pre-fabrication of level units (5) comprising five floors each, which are lifted to intermediate or final position by monkey-climbers. The construction process can co-exist with normal activity of already-lifted floors, or can be interrupted if needed, and be resumed later, e.g. after the end of an economic slump. Access to the building and floors is made through the basement (13,24) and the supports (3). <IMAGE>
