Abstract (en)
The adjustable fitting consists of at least two support elements (2) arranged symmetrically to the bed axis and attached suspended on upper spring slats (4) which, in turn, are mounted in end caps (1), and having cutouts (11) in the lower region for receiving additional slats (5). By displacing the spacers (3), the effective deflection can be adjusted for a predetermined load by more or less support of the lower slat (5). <IMAGE>

Abstract (de)
Verstellbeschlag für Lattenroste oder Liegen, zur Härteverstellung von Liegezon.
