Abstract (en)
[origin: EP0551522A1] A device for transferring film in such a structure that a feeding reel (15) around which film transferring tape (19) is wound and a take-up reel (16) for taking up said tape after use are rotatably provided in the case (11), and a pointed head (18) is protrusively disposed at one end of the case (11) so that one end of said tape (19) fed from the feeding reel (15) is twisted by 90 DEG ahead of the head (18), untwisted after passed by the pointed part (32) of the head (18) and wound around the take-up reel (16). Since the tape (19) is twisted by 90 DEG ahead of the head (18), the direction of operating the transfer device is at right angles to the operation direction with the conventional device. As a result, erasure or application of adhesive is enabled with the device moved horizontally on the table while held at both surface thereof by the operator's hands without elbows squared, whereby the head of the device can be shifted to a desired position exactly and stably. <IMAGE>
