Abstract (en)
[origin: EP0551575A1] The drawer side wall is composed of a double-walled, upper profile portion (12) which is bent from a metal sheet and is open on the underside. A separately produced lower profile portion (14) which is connected to the upper profile portion is introduced into the open underside of said upper profile portion, with the result that the drawer side wall forms a closed hollow profile. The lower profile portion (14) which is introduced into the open underside of the double-walled, upper profile portion (12) bent from a metal sheet is produced from plastic, to be precise preferably an injection-moulded thermoplastic polymer. <IMAGE>
