Abstract (en)  
[origin: EP0552444A1] The invention relates to a vacuum cleaner having a partition (6) between compartments (2, 7) of different air pressure and having at least one electric lead (8). In order in this case to be able to pass this lead or a plurality of leads (8) in a simple manner and with little expenditure tightly through the partition (6), a rubber-elastic, compressible closure piece (11) is inserted in an opening (10) in the partition (6), in which closure piece, in addition to a passage (15) for a lead (8, 9), a further passage (15) without an inserted lead can be provided which closes when the closure piece (11) is pressed into the passage (10) under mechanical prestress. <IMAGE>
